

SPOOKY STAR PARTY AT BISHOP OBSERVATORY
10-28-22 (cloud-out 10-29-22)

Have you ever wanted to see a spooky Crescent Moon, scary rings of Saturn, the phantom moons of Jupiter, or the red hue of Mars? Here is your chance to see them all, plus much more.

Georgia Youth Science and Technology Center (GYSTC) along with Georgia Highlands College (GHC) will host a Spooky Star Party at Georgia Highlands College's Bishop Observatory, off of Booze Mountain Road, on Friday, October 28th, starting at 6:51 p.m. (sunset). We will keep the observatory open from sunset until 11:00 p.m. for all ghostly ghouls who wish to view the celestial heavens. (Costumes not required)

We will have a Bootiful time and Halloween snacks will be provided for participants, as long as they last. Please keep in mind the following:

- It will be cold so dress warmly, with layers.
- Georgia Highlands is a non-tobacco use campus.
- If it is already dark when you arrive at the observatory parking lot, turn your vehicle lights off and carefully use your parking lights.
- If you wish to bring a flashlight, that is fine but be sure to have a piece of red cellophane covering the lens to keep the brightness down.
- Children must be accompanied by an adult.

If it is cloudy, the cloud-out make-up date is Saturday, October 29th.
